Introduction

The Magply Euroclass A1 board can be used as a fire mitigation sheathing board for Timber Frame, Steel Frame, Rainscreen Cladding, SIP Panels, Spandrel Panels and Modular Build.

Magply features a Magnesium Oxide formulation which is manufactured from a production process that ensures a very low chloride content enhancing both stability and durability. Magply carries internationally recognised accreditations confirming the boards' ability to deliver fire integrity, racking strength, impact and pull-out resistance.
